Customer Reviews

This is a must-have for any student in the health profession field. Helps with pathophysiology as well as anatomy and physiology. You can quiz yourself by writing down the answers to each letter listed on the front, or do a quick overview to make sure you know each part. Info on the back is basic but the gist is what you need most the time to help your memory of each item. These cards are sorted by system which is perfect for patho and A&P. Great pictures too.

I am taking a fast pace summer Anatomy & Physiology course for nursing school and these are perfect for studying. The cards are organized by organ system so anytime we get into a new system

I just grab the stack. The cards are blank on one side and have the labels on the back so you can quiz yourself if you want. Sometimes I copy the blank sides of the cards just to write the labels to help me remember how to spell the body parts. Another benefit to these is that they are so portable I just stick them in my binder pocket. We have enough heavy books to lug around these are awesome. I would also check out the Kaplan coloring book for A & P.

These are a life saver for A&P students. The cards are separated into different systems i.e. skeletal system, nervous system, endocrine system, reproductive system, etc., which makes them that much more helpful. Additionally, there are a few (10) coloring cards if you are more of a tactile learner. The cards are very detailed and have views from different angles (superior, mid-sagittal, etc.). I am very pleased with this purchase and strongly suggest getting these for yourself if you want to excel in the course.

Loved them. I used them to start trying to memorize all the structures then used the anatomy coloring book to help drive it home. I've learned so much in the last week, it's amazing

It was very helpful to have the pictures, but I ended up writing in a bunch of terms that weren't originally on the cards. It was frustrating that they were all incomplete, but I made it work. If I had known that I would have to write all over them, I would have gone for a cheaper set.

These are very detailed flashcards and perfect study material for my wife for her LPN degree. I would definitely buy more products from this seller in the future. Thank You.

Excellent set of cards to aid in studying Anatomy and Physiology. I use them when waiting in line or during down time to reinforce what I've learned in class. I introduced them to my study group for AP1 and, within a week, everyone had their own and was using them to study. They are focused on the Anatomy versus Physiology aspect. I aced the skeleton and survived the muscle part of my lab practical because of these. These would be good to use to review or reinforce your knowledge once you've finished your class or schooling. I'm not sure if these are useful for intense medical classes, such as studying for an MD, but they were useful for us and we had a number of nursing students in the group. The cards include all the systems of the body.

I bought this to help me study for my Human Anatomy and Physiology class and it's definitely well

worth the money.
